1 Introduction

TimeScroll is a desktop application that automates the creation of examination schedules. It helps educational institutions manage complex scheduling requirements by:

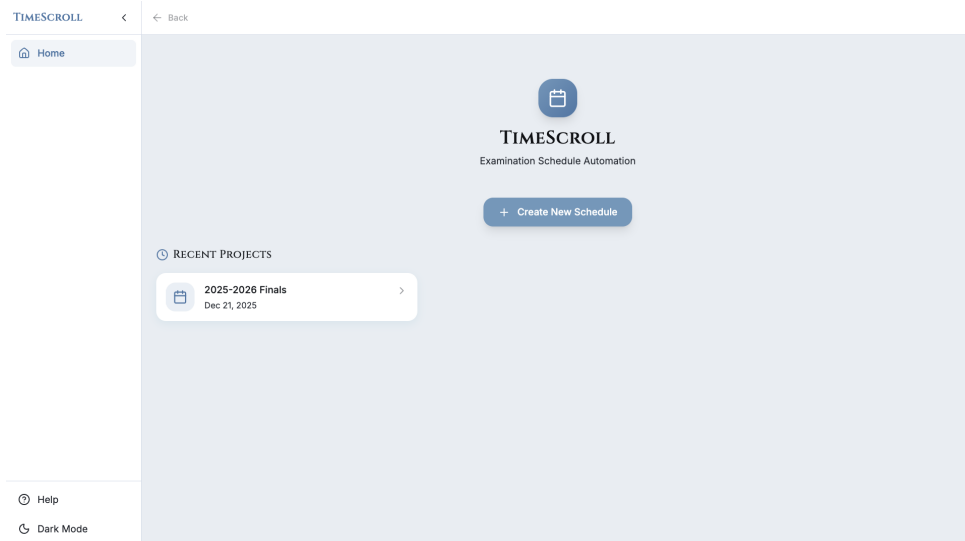

- Automatically allocating classrooms based on capacity
- Detecting scheduling conflicts for students enrolled in multiple courses
- Generating optimized schedules that respect time constraints
- Providing an intuitive visual calendar interface

This guide will walk you through all features of TimeScroll and help you get started with creating your first examination schedule.

2 Getting Started

2.1 Launching the Application

When you first launch TimeScroll, you will see the **Welcome Screen**. This is your starting point for creating new schedules or opening existing ones.

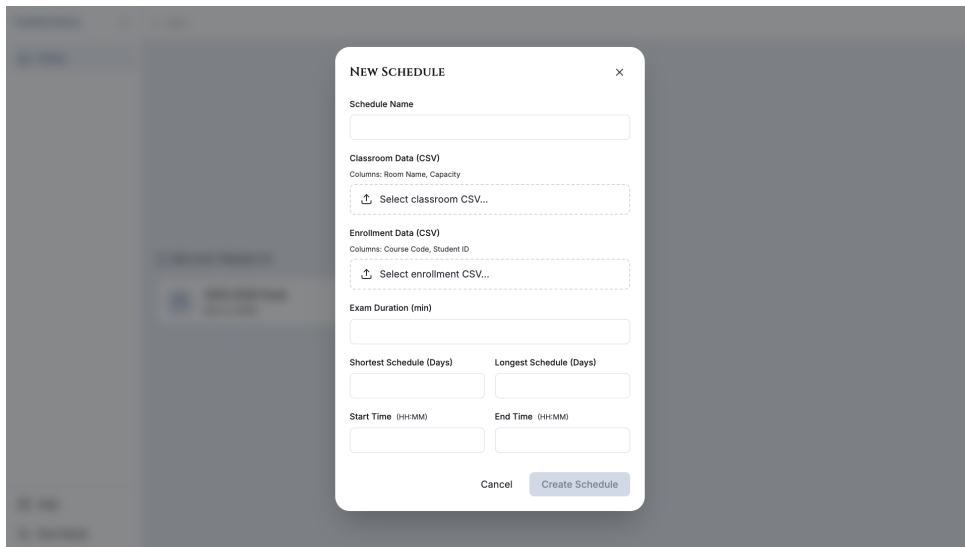

From the Welcome Screen, you can:

- Click **Create New Schedule** to start a new project
- Select a recent project from the list to continue working
- Delete unwanted projects by hovering and clicking the trash icon

3 Creating a New Schedule

3.1 Step 1: Open the New Schedule Dialog

Click the **Create New Schedule** button on the Welcome Screen. This opens the schedule creation dialog where you will configure your examination period.

3.2 Step 2: Enter Schedule Details

Fill in the following required information:

Field	Description
Schedule Name	A descriptive name for your schedule (e.g., "Fall 2024 Finals")
Classroom Data	CSV file containing room names and capacities
Enrollment Data	CSV file containing course codes and student IDs
Exam Duration	Default length of each exam in minutes
Schedule Duration	Minimum and maximum number of exam days
Time Range	Daily start and end times (24-hour format)

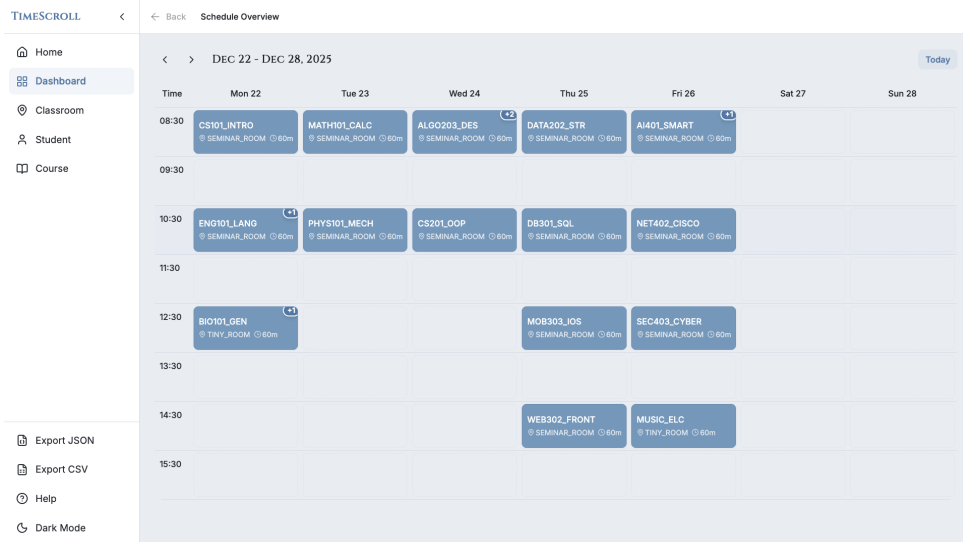

3.3 Step 3: Generate the Schedule

After filling in all fields and selecting your CSV files, click **Create Schedule**. TimeScroll will:

1. Import your classroom and enrollment data
2. Analyze student enrollments to detect potential conflicts
3. Generate an optimized schedule using intelligent algorithms
4. Display the results in the Dashboard calendar view

4 Using the Dashboard

The Dashboard provides a visual calendar view of your examination schedule.

4.1 Navigating the Calendar

- Click **Today** to jump to the current week
- Click on an exam block to view its details

4.2 Understanding Exam Cards

Each exam card displays:

- The course code
- The assigned classroom
- The exam duration

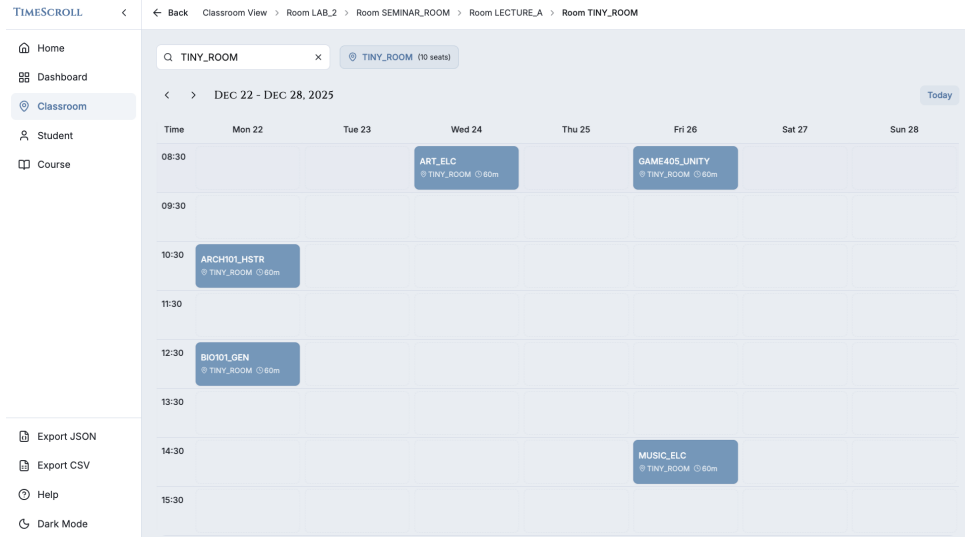

Tip

If multiple exams are scheduled at the same time (in different rooms), you will see a badge with a + symbol showing the count. Click it to view all concurrent exams.

5 Managing Data

5.1 Classrooms

Navigate to the **Classroom** section from the sidebar to view all rooms in your schedule.

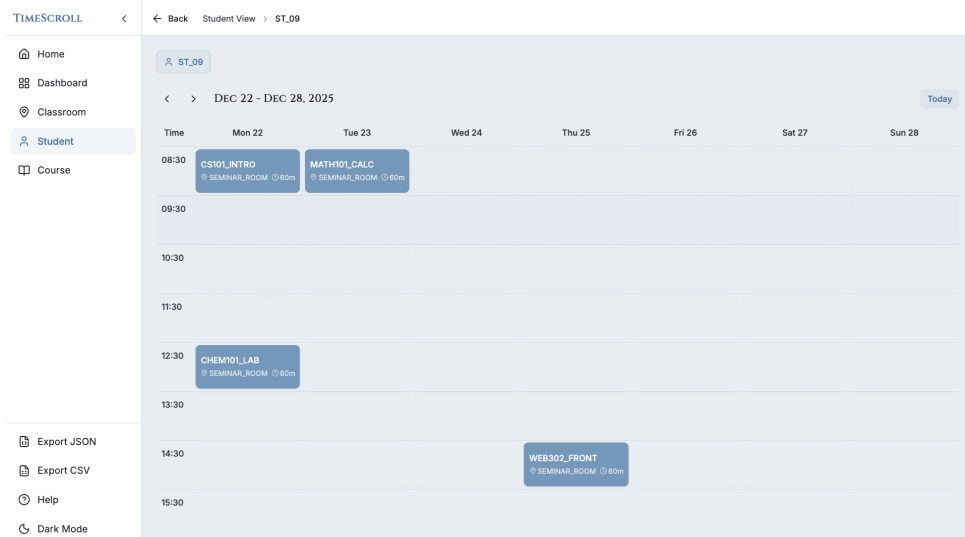

This view displays:

- Room names
- Room capacities

5.2 Students

The **Student** section shows all students included in your enrollment data.

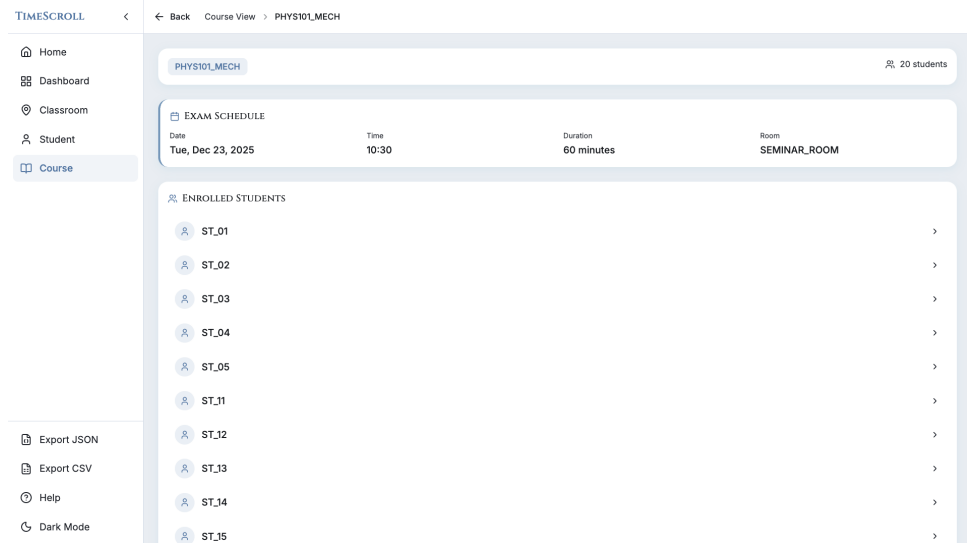

For each student, you can view:

- Student ID
- List of enrolled courses

5.3 Courses

The **Course** section displays all courses and their scheduled exams.

Course information includes:

- Course code
- Number of enrolled students
- Assigned exam date and time
- Assigned classroom

6 Navigation and Settings

6.1 Using the Sidebar

The sidebar provides quick access to all sections of the application.

Sidebar Options:

- **Dashboard** — View the calendar schedule
- **Classroom** — Manage room data
- **Student** — View student information
- **Course** — View course details
- **Light/Dark Mode** — Toggle between themes
- **Export** — Export your schedule

6.2 Switching Themes

TimeScroll supports both light and dark themes. Click the theme toggle button in the sidebar to switch between them. Your preference is saved automatically.

6.3 Exporting Your Schedule

To export your schedule:

1. Click the **Export** button in the sidebar
2. Choose your preferred format (JSON or CSV)
3. Select a save location
4. Click **Save**

7 Tips and Best Practices

Tip

Plan Your Data: Ensure your CSV files are accurate before importing. Incorrect data may result in scheduling conflicts or errors.

Tip

Set Realistic Time Ranges: Make sure the time range and exam duration allow enough slots for all your exams. If you have 50 exams and only 3 time slots per day across 5 days, scheduling may fail.

Tip

Review the Schedule: After generation, review the calendar to ensure all exams are scheduled appropriately. Click on individual exams to verify their details.

8 Troubleshooting

8.1 Schedule Generation Failed

If the schedule cannot be generated, check:

- Your CSV files are properly formatted
- You have enough classrooms to accommodate all students
- The time range allows sufficient exam slots
- The minimum/maximum days setting is realistic

8.2 CSV Import Errors

Common CSV issues:

- Missing column headers
- Extra commas or special characters
- Empty rows in the file
- Incorrect file encoding (use UTF-8)
